

Disaster risk in the government plans of Brazil's 2026 gubernatorial candidates

What 172 candidates say, and leave unsaid, about floods, droughts, wildfires and landslides. Content analysis with local AI and the acR package.

74.4%

mention disaster risk in their plan

34.9%

have concrete action in most of their passages

4

tie action to a target, deadline or budget

3

promise an amount in reais for the topic

Six takeaways

1

Almost all talk, few promise

74.4% mention the topic, but only 34.9% have concrete action in most passages. Only 0.8% of passages carry a target, deadline, indicator or budget.

2

Only 3 candidates put money behind the promise

Tarcísio (SP), R\$ 25 billion by 2029; Carlos Machado (SP), R\$ 1.5 billion; Ben Mendes (MG), R\$ 300 to 520 million. The rest is past spending, criticism or another topic.

3

Plans look at what comes before the disaster

Prevention and preparedness in 71.5% of candidates; response in 34.9%; recovery in 24.4%. Only 27 cover the whole cycle.

4

Plans do not follow the state's disaster

In Piauí, drought is 92% of records, yet only 17% of candidates cite it. 79 do not cite their own state's main disaster.

5

Those who suffer most do not promise more

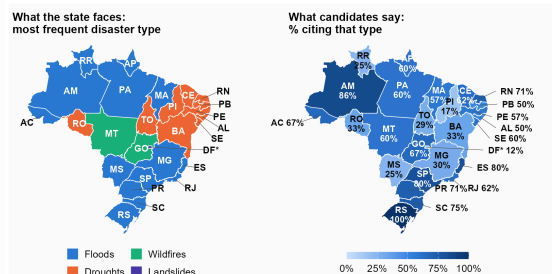

The intensity of disasters in each state is unrelated to how concrete its plans are (Spearman correlation of -0.02).

6

Plan length matters more than ideology

The topic appears in 35% of plans under 5,000 words and in 100% of those over 20,000. Concreteness does not differ across political camps.

The disaster that hits each state most, and how many candidates cite it

Questions to follow the campaign. What are the target, deadline and budget for prevention? Does the plan address the disaster that hits the state most? Does the sentence say what will be done, or only what has been done?
